CREATING REPOSITORY IN IBM CLOUD:

The screenshot shows a dark-themed dialog box titled "Create repository" with a close button (X) in the top right corner. The dialog contains two numbered steps for creating a repository. Step 1 is "Tag an image to point to this registry. Choose a local image, target namespace, and target repository." Below this step is a code block containing the command `docker tag <local_image> icr.io/<my_namespace>/<my_repo>` and a copy icon. Step 2 is "Push the tagged image." Below this step is a code block containing the command `docker push icr.io/<my_namespace>/<my_repo>` and a copy icon.

Create repository

1. Tag an image to point to this registry. Choose a local image, target namespace, and target repository.

```
docker tag <local_image> icr.io/<my_namespace>/<my_repo>
```

2. Push the tagged image.

```
docker push icr.io/<my_namespace>/<my_repo>
```
